Biol. Chem. 274:8455-8459(1999).

-i- FUNCTION: Binds to FN14 and possibly also to TNRFSF12/APO3. Weak inducer of apoptosis in some cell types. Mediates NF-KappaB activation. May promote anglogenesis and the proliferation of endothelial cells.
                                                                                                                                                                                                                                                       InterPro; IPR000478; T Pfam; PF00229; TNF; 1. A Tregaskes C.A., Young J.R., Burnside J.;
L Submitted (JUN-1999) to the EMBL/GenBank/DDBJ databases.
C. --- FUNCTION: Cytokine that binds to TNFRSF5. Mediates B-cell proliferation in the absence of co-stimulus as well as IgE production in the presence of IL-4. Involved in immunoglobulin class switching (By similarity).
C. --- SUBUNIT: Homotrimer (By similarity).
C. --- SUBCELULAR LOCATION: Type II membrane protein. Also exists as cextracellular soluble form (By similarity).
C. --- FTM: The soluble form derives from the membrane form by proteolytic processing (By similarity).
C. --- SIMILARITY: BELONGS TO THE TUMOR NECROSIS FACTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

FUNCTION: Cytokine that binds to TNFRSF11B/OPG and to FUNCTION: Cytokine that binds to TNFRSF11B/OPG and activation fac TNFRSF11B/ARAK. OSteoclast differentiation and activation fac Augments the ability of dendritic cells to stimulate naive T-proliferation. May be an important regulator of interactions between T cells and dendritic cells and may play a role in the regulation of the T cell-dependent immune response. May also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  dendritic-cell function."

Gene [6]

"Clo

5

an important role in enhanced bone-resorption in humoral hypercalcemia of malignancy.

SUBUNIT: Homotrimer.

SUBGELLULAR LOCATION: Type II membrane protein and secreted (1soforms 1 and 2); Cytoplasmic (1soform 3).

ALTERNATIVE PRODUCTS: 3 isoforms; 1 (shown here), 2 and 3; iproduced by alternative splicing.

TISSUE SPECIFICITY: HIGHLY EXPRESSED IN THYMUS AND LYMPH NOTISSUE SPECIFICITY: HIGHLY PRODUCTS AND LYMPH NOTISSUE SPECIFICITY: HIGHLY PRODUCTS AND LYMPH NOTISSUE SPECIFICITY: HIGHLY PRODUCTS AND LYMPH NOTISSUE SPECIFICITY HIGHLY PRODUCTS AND LYMPH NOTISSUE SPECIF

are

NOT IN NONLYMPHOID TISSUES AND IS BUT NOT IN B CELLS. A HIGH LEVEL TRABECULAR BONE AND LUNG. AND IS ABUNDANTLY EXPRESSED IN T LEVEL EXPRESSION IS ALSO SEEN IN NODES BUT

by proteolytic processing. The cleavage may be catalyzed by ADAM17. A further shorter soluble form was observed.
DISEASE: DEFICIENCY IN TWESF11 RESULTS IN FAILURE TO FORM LOBULO-ALVEOLAR MAMMARY STRUCTURES DURING PRECHANCY, RESULTING IN DEATH OF NEWBORNS. TRANCE-DEFICIENT MICE SHOW SEVERE OSTEOPETROSIS, WITH ON OSTEOCLASTS, MARROW SPACES, OR TOOTH ERUPTION, AND EXHIBIT PROFOUND GROWTH RETARDATION AT SEVERAL KELETAL SITES, INCLUDING THE LIMBS, SKULL, AND VERTEBRAE AND HAVE MARKED CHONDRODYSPLASIA, WITH THICK, IRREGULAR GROWTH PLATES AND A RELATIVE INCREASE IN HYPERTROPHIC CHONDROCYTES. PTM: N-glycosylated.

PTM: The soluble form of isoform 1 derive the soluble form 1 derive the soluble fo derives from the lyzed by HITH

SIMILARITY: BELONGS TO THE TUMOR NECROSIS FACTOR FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           111
                                                                                                                                                                                                                                                                                                                                                                                       Bone Miner.
             FUNCTION: Cytokine that binds to TNFRSF11B/OPG and to TNFRSF11A/RANK. Osteoclast differentiation and activation factor. Augments the ability of dendritic cells to stimulate naive T-cell proliferation. May be an important regulator of interactions between T cells and dendritic cells and may play a role in the regulation of the T cell-dependent immune response. May also play an important role in enhanced bone-resorption in humoral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DPSQVSHGTGFTSFGLLKL 260
